

SOC 2 Final Assessment

SOC 2 GRC Simulation - Maju Jaya HR Cloud

Objective

Summarize the results of the simulated SOC 2 assessment, including scope, risks, controls, testing results, identified findings, remediation, and final status.

Assessment Summary

The simulated SOC 2 assessment covered the Maju Jaya HR Cloud Platform, including the HR application, production database, supporting AWS infrastructure, relevant personnel, and security and operational processes.

The assessment identified key risks related to unauthorized access to employee personal information, unauthorized access or modification of payroll data, and service availability and recovery.

Relevant controls included MFA for privileged accounts, role-based access control, least privilege, daily backup, and restore testing.

The controls were mapped primarily to the Security, Confidentiality, and Availability Trust Services Criteria.

Control Testing Results

The MFA control was tested across 20 privileged accounts.

- 19 accounts passed testing.
- 1 exception was identified.

The exception involved a temporary emergency privileged account without MFA.

Finding and Remediation

The root cause was a gap in the account provisioning process, which did not automatically enforce MFA for temporary privileged accounts.

Remediation included:

1. Enabling MFA on the affected account.
2. Updating the privileged account provisioning process.
3. Performing verification and retesting.

Final Status

Final Finding Status: Closed

The identified exception was remediated and verified.

Overall Assessment

The simulation demonstrates a complete GRC workflow from risk identification through control assessment, evidence review, testing, finding management, remediation, and final assessment.

Disclaimer

This is a fictional SOC 2 simulation created for learning and portfolio purposes. It does not represent a real SOC 2 examination, audit opinion, or professional engagement.
